The operating mode and the bit width are defined via a DIP switch group on the side of the terminal. The operating mode (outputs/inputs) is determined via a switch and the number of inputs or outputs to be reserved (2, 4, 6 or 8) via two switches. The selected configuration is displayed via 3 LEDs. The binary placeholder terminal is also a potential feed terminal. It provides the 24V field voltage for the following Bus Terminals via the power contacts.
